

Client: Development Securities
Project Value: £27m

CARNIVAL UK, SOUTHAMPTON

Carnival House comprises of 142,500sqft of B1 office around a dramatic central 5-storey wintergarden.

The prominent use of glass is complimented by the use of bold precast concrete panels. Brise soleil to the elevation provides solar shading and a distinctive appearance to the building. A lightweight, semi-translucent ETFE roof membrane encloses the wintergarden to form a tempered internal environment accessible to building users.

"The Largest Longitude / Time Plot in the World" by artist Chris Tipping, in association with the NOC Southampton, a work in low relief which has been constructed from periodic panels of mid ocean and sea surface topography. The information has been translated and cast into the concrete rainscreen panels to create an illuminated shifting pattern.
