

Client: Tubelines Ltd
Project value: £120m

CAMDEN STATION : TUBELINES LONDON

This project entails the complete redevelopment of Camden Town tube station and adjacent site to provide a much larger station with generous circulation spaces offering improved wayfinding. The scheme will also provide step-free access, improved means of escape and emergency services' ingress, increased staff accommodation and refurbishment of the existing platforms.

A temporary station facility is to be provided, thus keeping the station operational throughout the construction period.

The site redevelopment will facilitate a new substation, church relocation and the construction of a transfer structure to enable above station development.
