## CENTRAL PARK GATEWAY

The Gateway interlink project links Oldham Road with Northampton Road, creating the frontage for Phase I of Central Park and forming the first part of a longer north-south link connecting Central Park and Sportcity.

The gateway consists of a dual carriageway road passing under an existing heavy rail line with associated public landscaped works and the formation of a new multi modal transport interchange.

The interchange includes a bus station, a vehicle drop off serving Phase I of Central Park and a proposed Metrolink tram station.
